

CIU-WECC

2024 Turkish robotic competition

WOMEN IN STEM

As the dawn of innovation brightens the horizon, the CIU Robotics Club, with members from the CIU Women's Empowerment Center, is set to captivate the audience at the prestigious robotics competition in Turkey in 2024. The members, including **Mahisa Ahadi** from Iran, **Delight Chirume** from Zimbabwe, and **Seterah Qoohi** from Iran are gearing up to demonstrate their robotic creations. This event marks a significant milestone not only for the participants but for the entire CIU community as we witness a harmonious blend of technology and gender empowerment taking the center stage.

The involvement of the Women's Empowerment Center underscores a crucial message: the realm of robotics and STEM, traditionally male-dominated, is increasingly becoming a domain where women excel and lead. Our female members are not just participating; they are influencing the future course of technology with their ingenuity and expertise.

We call upon the CIU community to extend their support to our team as they embark on this exciting journey. Your encouragement means more than just goodwill; it represents the collective strength and unity of our institution. Follow their progress, cheer them on, and become a part of this incredible narrative.

Let's root for our team as they represent the best of CIU—innovation, determination, and the empowering spirit of inclusivity in technology!
